

colibre App

Brand development and UX concept for an outdoor app

Period: Summer semester 2023 | **Role:** UX Lead & Brand Design | **Tools:** Figma, FigJam

Project Overview

Colibre was a university team project focused on building a consistent brand identity and a seamless digital experience for an outdoor community platform. The goal was to create a clear and expressive brand while designing an intuitive app that connects people, activities, and shared experiences.

Role & Results

- Led project organization and delegated tasks within the team
- Developed the brand compass and defined key brand values
- Built a consistent design system for interface and interaction design
- Created an interactive app prototype including navigation and flow logic
- Integrated team deliverables such as graphics, illustrations, and copy into the UX concept
- Aligned brand image, visual language, and user flows to strengthen overall brand perception

Impact & Learnings

The project demonstrated how brand design and user experience can merge into a cohesive digital identity. I deepened my understanding of strategic brand management, team coordination, and scalable design-system development.
