

Interone

UX projects in an agency environment

Period: February 2024 – December 2024 | **Role:** UX Design Working Student | **Tools:** Figma, FigJam, Miro, Confluence, Jira

Project Overview

At Interone, I contributed to several UX projects for clients including Volkswagen and the Ministry of the Interior. My focus was on designing clear user flows, consistent component structures, and scalable design solutions.

A key project was the one conference app, which I redesigned for desktop and mobile while expanding its functionality and improving the overall user experience.

Role & Results

- Redesigned the one conference app for desktop and mobile, improving orientation and usability.
- Extended core features and navigation logic, reducing friction in key user tasks.
- Optimized UX for Volkswagen ID. Buzz and California pages and built an internal Figma component library to accelerate future VWN projects.
- Designed and tested digital application processes for the public sector, reducing complexity and validating form logic.
- Developed a multi-brand design system using Figma variable collections, unifying UI standards and streamlining developer handoffs.

Impact & Learnings

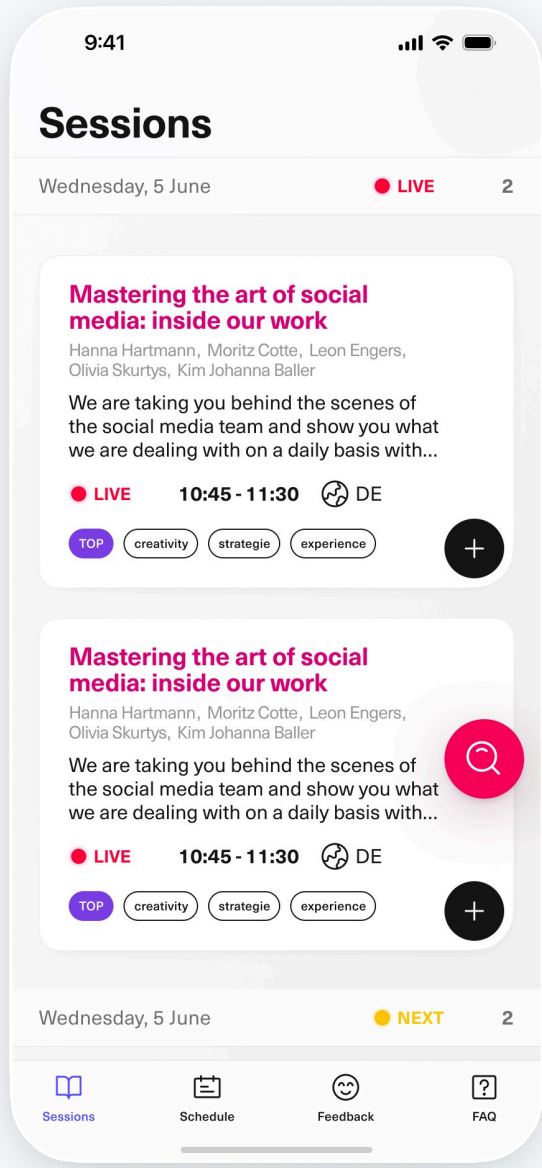

I strengthened my skills in systematic UX design, design-system architecture, and cross-functional collaboration.

Documented components, tested user flows, and consistent handoffs helped raise both quality and scalability across projects.
